

Peer to Peer File Sharing System

REMOTE METHOD INVOCATION(RMI)

AIDEN PERERA & ROBERT SMIT

Description

This is a peer to peer file sharing system written in java using remote method invocation (RMI). Each client connected to the network will act as a server as well as a client. Using RMI's interface clients can send queries and receive data. Clients will have the capability of searching for a specific file through the network. If the search is successful, the client can decide which host-client to download the file from.
